

FULONG8 Whitepaper — 2025-10-21

Abstract

FULONG8 is a safer, faster finance layer that fuses instant global settlement (Any2AnyPay™ via FULO\$), rug-resistant trading (ARPI™), RWA tokenization, and an AI-assisted superapp into one clean surface.

Core Pillars

1) ARPI™: Anti-Rug Pull Intelligence with on-chain policy, enforcement hooks, and live risk scoring. 2) FULO\$: an in-flight settlement unit for Any→Any payments with automatic FX routing. 3) DEX/Swap: Uniswap v4-class hooks, MEV protection, and retail-safe flows. 4) RWA: entity-first, ZK-KYC, and compliant transfer gates. 5) SuperApp + AI: chat, pay, trade, tokenize, guided by an AI copilot.

Fulo Atlas Sphere™

A zoomable, 3D market intelligence surface. See the top 200+ assets, filter by sector, risk, or region, open live charts, and jump into swap—backed by ARPI™ overlays.

Roadmap

Phase 1: multi-lang site, ARPI UI, Any2AnyPay demo, Atlas v1. Phase 2: wallet connect, venue aggregation, practice mode, pilot corridors. Phase 3: bridge abstraction, RFQ makers, RWA wizard. Phase 4: expanded corridors, plugin store, app-chain research.

Security & Transparency

Timelocks, multisig, audits, public bug bounty; commitment ledger linking LP locks, vesting, and policies.

Disclaimer

No investment advice. Feature availability depends on jurisdiction and licensing. This document describes a phased build; some elements are demonstrations pending integrations.
